

If so, E01 means the battery was over-discharged and E02 seems to mean the opposite. Confusing, but these systems absolutely require the battery to be in good health - they can charge ...

My problem is that the system goes onto E01 error very quickly, cutting the load output, E01 indicating low battery voltage. Seems like the controller is protecting the battery, but obviously I ...

I recently got the E01 code for my Adventure solar charge controller and it was most likely because my battery was dead. Hadn't had a charge in lie 8 months, so I disconnected the solar ...

solar charge controller Error code E01 appears when the battery bank is at low voltage and the charge controller cannot charge it. To correct this, first charge the battery bank using AC ...

We have this solar system on our 2023 Sunseeker 3270. It keeps beeping and shows error code E01 for battery 1. Battery 2 seems to be fine. It only beeps in the daylight and stops ...

Understanding Thunderbolt Solar Charge Controller error codes is vital for maintaining a smooth solar power system. With this knowledge, you can ensure your solar setup runs efficiently, ...

Addressing the "E01" error generally requires checking battery connections, ensuring appropriate voltage, and possibly troubleshooting the solar controller settings.

Try this simple troubleshooting step: disconnect the solar panels and the battery, and then power the charge controller using another 12-volt battery for about 4 minutes.

For MPPT controllers, E01 usually represents an overcurrent warning, while E02 warns you of high PV voltages. Responding to these alerts can save your system from severe damage! ...

The good news is, it is an easy fix to properly calibrate your controller. The controller just needs to be reset by disconnecting the battery and solar leads and reconnecting in the proper order. Follow these ...
