

1 standard power scale inverter cabinet for ships

What is a fixed installation "shore power" frequency converter?

Fixed installation "SHORE POWER" frequency converters. Our fixed "SHORE POWER" frequency converters are designed for use on the dockside public supply grid networks of 50Hz or 60Hz with 3 phase standard input voltages of 208V, 380V, 400V, 460V or 575V. The output voltage and frequency will be according to the needs of the ship.

What types of ships can use a 'shore power' frequency converter?

The "SHORE POWER" frequency converters up to 250kVA are available for installation on board all types of Super-yachts, Cruise Liners, passenger ships, Vehicle ferries, Navy vessels and Coastguard fast patrol and search & rescue boats.

How does a dockside power converter work?

When the on board "SHORE POWER" converter is connected to the dockside power source service point, the frequency converter will automatically adjust to the local voltage and frequency and deliver to the Vessel a high stability and galvanically isolated power supply.

What is a shore to ship frequency converter?

The shore to ship frequency converters are manufactured in sizes of 50kVA to 400kVA in an indoors type of enclosure IP23 or IP31 for installation in a sub-station or power distribution room. The shore to ship frequency converters are also manufactured in an all-weather IP54 outdoor enclosure for installing on the dockside or mooring berth.

While incorporating power electronic equipment into ship designs offers many advantages, the ship integration process for power electronic equipment is not well understood. This ...

Fully electric ships have become popular to meet the demand for emission-free transportation and improve ships' functionality, reliability, and efficiency. Previous studies reviewed ...

The inverters enable ships to connect to smart grids, opening up opportunities for grid-to-ship power supply and bidirectional power flow. Ships with these inverters can return surplus power ...

The Power Systems International "SHORE POWER" frequency converters are a cost effective means of providing "point of use" power on the dockside or "on board" for all types of ships, ...

Danfoss Drives provide inverters and drives for power conversion, which convert the 50Hz shore power to the 60Hz power typically used onboard sea going ships. Grid converters use Active Front End ...

Many commercial ships are now built with power electronic drives, including passenger ships, tankers, icebreakers, cable laying ships and floating offshore platforms. Inverters with the ...

1standard power scale inverter cabinet for ships

Whether it's for controlling power distribution or managing electrical systems, our cabinets offer a reliable solution. Upgrade to our Four-quadrant Shore Power Inverter Power Cabinets and ...

Onboard DC Grid(TM) is a modular power system platform for ships, that enables simple flexible and functional integration of energy sources and loads.

SHORE POWER CONVERTER FOR MW-SCALE The EEI-LV1000 Series for shore power converters allow full operation of the vessels on board electrical system without generators. ...

The FCX Shore power solution dramatically reduces ship emissions as well as noise and vibration from ships in port . . . at a lower operating and maintenance cost than motor generator sets ...
