

The global market for energy storage is set to reach unprecedented levels next year, with utility-scale projects leading the charge, according to BNEF. BNEF forecasts that global energy ...

To support our vision for a reliable and abundant energy system, the Solar Energy Industries Association (SEIA) is establishing goals for battery storage adoption in the United States and ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like California and Puerto Rico, and continued ITC access through ...

The United States solar + storage industry is experiencing growth and innovation in some segments but stagnation in others as it enters a new year. Both small- and large-scale energy ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

The first half of 2025 proves that solar and storage can thrive even in difficult circumstances. They are dominating new power additions, driving domestic manufacturing, and ...

In total, new solar projects in 2025 are expected to make up more than 50% of the planned added utility-scale electric generation for 2025. Combined with planned battery storage ...

Energy storage systems, mostly large batteries, are important because they help store solar and wind power for use when the sun isn't shining or the wind isn't blowing. In 2025, over 31 ...

The EIA forecasts 21.3GW of new solar PV additions in H2 2025, while energy storage additions are forecast to reach 12.4GW in H2 2025, for a total of 18.3GW over the year.
