

Global battery cell oversupply driven largely by China and is set to continue China lithium-ion battery cell production capacity overlaid by global lithium-ion battery demand

Chinese storage providers aren't just exporting products - they're establishing new operational blueprints that European utilities are scrambling to adopt. With 56.5 GWh of global contracts secured ...

Europe realizes it cannot compete with China or the U.S. if it delivers a death sentence to all its hydrocarbon plants. The net-zero agenda will be delayed to preserve industries and their jobs.

The platform gathers a wide array of energy players in China and the EU including relevant public authorities, energy associations, energy industry and businesses, as well as leading ...

China is now the world's top energy investor, pouring ~\$625B into clean energy in 2024. China hit its 2030 wind/solar target six years early. China added 21 GW of coal in H1-2025 and...

In fact, recent research has found that coal's share of the European energy mix has not significantly increased. This is due to falling demand for electricity, and the rapid addition of solar and ...

Both regions have rolled up their sleeves to tackle grid instability and renewable intermittency through bold policy frameworks. But here's the kicker: China-Europe energy storage ...

The seminar underscored that converting coal plants is critical for reducing greenhouse gas emissions and combating global warming. Various retrofitting approaches were explored, such as integrating ...

In terms of grid-side independent new-type energy storage power station serving safe electricity system operation and not engaging in energy distribution, local government can grant ...

Based on a brief analysis of the global and Chinese energy storage markets in terms of size and future development, the publication delves into the relevant business models and cases of new energy ...
