Dust accumulation on photovoltaic (PV) modules is a major factor contributing to reduced power output, lower efficiency, and accelerated material degradation, particularly in arid and industrialized regions.

How does dust affect solar panels?

Among these, dust is a prominent factor that substantially reduces panel efficiency and power output as the mass of dust deposition increases. This reduction in efficiency is primarily due to the obstruction of solar irradiance reaching the PV cells, leading to decreased photon absorption and subsequent power generation [5,6].
