

How do you design a solar power plant?

The general objective in designing a Solar Power Plant is to adequately match the capabilities to the load requirements of the consumer, at a minimum cost of the system to the consumer. In order to accomplish this, the designer will need to know the following types of questions about the system.

How do solar power plants work?

Solar power plants use a lot of solar panels interconnected to produce a lot of voltage. The lithium-ion batteries store the electrical energy generated by the solar panel's combined work so that they can be used at night when there is no sunlight. How do concentrated solar power plants work?

Concentrated Solar Power Plants (CSP) do not convert sunlight directly into electricity. Instead, they use mirrors, lenses, and tracking systems to focus a large area of sunlight into a small beam. It is then used as the heated source, similar to a conventional power station.
