

Energy experts working for the World Wildlife Fund have calculated that Thailand and four Mekong Region neighbours could achieve 100% renewable energy electricity generation by 2050.

Thailand's solar electricity production accounted for approximately 21.09% of total renewable energy generation and about 2.20% of the country's overall electricity production.

Electricity Generating Authority of Thailand (EGAT), a state-owned utility, owns and operates most of the country's power generation capacity and nearly the entire national transmission network.

The Electricity Generating Authority of Thailand (EGAT) is a key generator and buyer of electricity generated from Independent Power Producers (IPP), Small Power Producers (SPP), as well as ...

EGAT, established on 1 May 1969, [2] is the largest power producer in Thailand, owning and operating power plants at 45 sites across the country with a total installed capacity of 15,548 MW.

Thailand's electricity supply is projected to reach 112,400 ...

Thailand's electricity supply is projected to reach 112,400 megawatts in the next 13 years, with power companies anticipated to play a larger role in power generation, according to the new ...

Investment in the development of new electricity generation facilities, aimed at promoting renewable energy, is expected to reach 1 trillion baht over the next six years under the novel power...

South Bangkok Power plant is a power source constructed in response to the electricity demand of heavy industries in the Southern part of Bangkok such as battery plants, automobile assembly ...

Explore the latest developments in Energy Transition Thailand at SIPET. Discover key insights and initiatives driving sustainable energy practices in Thailand.

BNEF's report shows that the levelized cost of electricity generation (LCOE) for a new utility-scale solar power plant became cheaper than a new combined-cycle gas turbine and coal ...
