

1. Use solar energy to get electricity, with 4 internal or external sensors. 2. LCD panel, with extra mini USB port for charging. 3. Light weight design for sensor, no need to adjust to balance when the tire is moving. 4. Monitoring ...

In January 2023, we started mass-production tires in a way the carbon neutrality (Scope 1 and 2) is achieved for the first time in Japan in the production process with the use of the hydrogen energy and solar power ...

Not only does it ensure a smoother ride, but it also improves fuel efficiency and prolongs the life of my tires. That's why I was intrigued when I heard about the latest innovation in tire pressure monitoring - TPMS solar ...

The results suggest that the one-end cap structure can be an effective energy harvester inside vehicle tires, providing a valuable solution for utilizing one-end cap structures in high-deformation ...

Following a successful proof-of-concept project, Sumitomo Rubber Industries (SRI) has begun mass production of tires using hydrogen and solar energy at its Shirakawa plant in Fukushima, Japan. ...

The new solar array is located at the company's Passenger/Light Truck Tire Plant in Graniteville, S.C. The new installation includes approximately 8 acres of solar panels that generate 2 MW of energy while ...

Nokian Tyres and renewable energy provider Enery signed a long-term contract for their zero CO2 tire factory in Oradea, Romania. This agreement supports Nokian Tyres' new passenger car tire...

Sumitomo Rubber Industries' Falken Tires plant in Thailand will become host to the world's largest rooftop solar array on a single facility.

One of the most significant advantages of integrating solar power into tire retreading operations is the potential for energy efficiency and cost savings. Solar panels can be installed on the roof or surrounding areas of the ...

"This solar array is another positive step in Bridgestone's journey to contribute to a more sustainable and equitable society for all." Consistent with Bridgestone's commitment to protect the ...
