

The main objective of the program is to enable a greater participation of renewable energies in the electricity matrix through the promotion of storage technologies, as well as to boost the sales levels ...

With an aim to support the country's decarbonisation plans, Chile has enacted a new Law 21505 to promote electrical energy storage and electromobility.

Through the deployment of cutting edge battery storage technology, Fluence is not only addressing the technical challenges of Chile's energy transition but also contributing to the nation's broader ...

Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the ...

The technological diversity of energy storage projects in Chile is remarkable. From battery storage systems to innovative projects with gases such as CO<sub>2</sub>, the country is exploring different solutions to ...

“Today, Chile is a superpower in terms of the development of energy storage due to the exceptional conditions of the Atacama Desert in terms of hours of solar radiation and the particularity of the ...

Chile's first battery energy storage projects were commissioned in 2009, and all but two of its 16 administrative regions have facilities in operation, under construction or in the planning stage.

Chile has emerged as a world leader in hybrid systems and standalone energy storage since implementing its Renewable Energy Storage and Electromobility Act in 2022.

At ATESS, we offer advanced, reliable, and scalable energy storage and EV charging solutions specifically designed for Chile's unique energy landscape. Our technology contributes to ...

The clear long-term objective is to move towards a 100% renewable, secure, resilient and efficient electrical system in Chile. Long Duration Energy Storage Systems include solutions ...
