

In 2023, Germany imported nearly EUR3.6 billion worth of PV systems, primarily solar cells and modules. Compared to the previous year, the value fell by 12.5%, the Federal Statistical Office...

Electricity imports and exports in Germany are primarily based on renewable energy sources. While there were concerns that phasing out coal and nuclear power would lead to a rise in imports, Germany ...

In Germany, net public electricity generation from renewable energy sources reached a record share of 62.7 percent in 2024. Solar power generation reached a new record of 72.2 terawatt hours in 2024, and the ...

Roughly 87% of the photovoltaic power stations imported to Germany in 2022 came from the People's Republic. The Federal Statistical Office (Destatis) reports that the value of these imports amounted ...

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and declining PV ...

For the first time, wind and solar power provided the largest combined share of Germany's public net electricity generation, totaling 202 TWh. Solar installations in Germany fed more than 70 TWh of electricity into the ...

China was Germany's main source for solar PV imports, with ** percent of these coming from there.

OverviewHistoryGovernmental policiesStatisticsCompaniesSee alsoExternal linksDuring the Reagan administration in the United States, oil prices decreased and the US removed most of its policies that supported its solar industry. Government subsidies were higher in Germany (as well as Japan), which prompted the solar industry supply chain to begin moving from the US to those countries. Germany was one of the first countries to deploy grid-scale PV power. In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar pow...

PV system imports fell sharply in the first five months of 2024: from January to May, the value of imported solar cells and solar modules fell by 66 percent compared to the same period last year to just ...

To integrate the large amounts of wind and solar energy safely into the existing grid, large battery systems will play an import role in Germany's future energy infrastructure to stabilize grid frequency.

The share of imports in the electricity mix fell in 2025 compared to the previous year. This analysis is based on the energy-charts data platform of the Fraunhofer Institute for Solar Energy Systems ISE, ...
