The panel is placed inside the bag and then lifted onto the roof. You can use this with a motor or winch if you don't feel like doing all that work yourself. This is another way to carry solar panels using the solar panel caddy, which uses a gravity-fed clamp device with a rubber handle that disperses the panel's weight evenly.

How does a solar panel lifter work?

The lifter fits quickly and easily onto the structure, and the solar panel fits into the lifter frame and is secured using bungee cords. The frame is laid against the wall, and the operator can then use the winch to lift the panel onto the roof, and it can then be mounted in place. This process is repeated until all the panels are installed.
