How is electricity paid in Switzerland?

The electricity price paid by Swiss households consists of three components. These are the grid costs (delivery from the power plant to the customer), the production costs and the taxes (water rate, compensatory feed-in remuneration - KEV, etc.). They each amount to approximately one third of the final price for the consumer.

What is the electricity mix in Switzerland?

The Swiss electricity mix varies from year to year, depending on the availability of different forms of production. Basically, around 60 percent comes from hydropower, around 30 percent from nuclear power and around 10 percent from new renewable energies. PV has been increasing for several years, while growth in wind power remains modest.
