

How to know if the lithium battery of the energy storage cabinet is fully charged

Should lithium ion batteries be fully charged during storage?

Lithium-ion batteries should not be fully charged during storage. In reality self-discharge is a phenomenon that exists in lithium-ion batteries. If the lithium ion battery storage voltage is stored below 3.6V for a long time, it can lead to over-discharge of the battery, which damages the internal structure of the battery and reduces its lifespan.

How do I choose a lithium-ion battery storage cabinet?

When selecting a lithium-ion battery storage cabinet, consider the following: Capacity Requirements: Ensure the cabinet accommodates the quantity and size of batteries used in your workplace. Regulatory Compliance: Choose a cabinet that meets safety standards for Class 9 Dangerous Goods.

How long can lithium ion batteries be stored in a storage cabinet?

When stored in a temperature-controlled, ventilated, and fire-rated cabinet, lithium-ion batteries can be safely stored for months to years depending on the state of charge and manufacturer guidelines. Can I charge batteries inside the storage cabinet? Yes, but only in cabinets explicitly designed for charging.
