

# Is it really possible to generate electricity from solar energy

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land. Is solar power a clean energy source?

Are solar panels putting out electricity?

The sun is always putting out energy, but how much electricity you actually get from your panels fluctuates based on several site-specific and environmental conditions. The optimal performance of a solar array is determined by its exposure to direct sunlight. Point panels true south (U.S. rule of thumb) to soak up sunlight from dawn to dusk.

How can solar energy be converted into usable energy?

There are different ways of capturing solar radiation and converting it into usable energy. The methods use either active solar energy or passive solar energy. Active solar technologies use electrical or mechanical devices to actively convert solar energy into another form of energy, most often heat or electricity.
