

By converting battery storage into rail cars that transport clean energy from remote solar and wind farms directly to urban centers, SunTrain offers a practical solution without the lengthy ...

A large battery mounted on a flatbed wagon in a railway siding at San Francisco port next to a small solar power installation shows how his vision is beginning to materialise.

PUEBLO, Colo. -- SunTrain, a San Francisco company, is designing a method to transport power by rail, moving containerized batteries between solar and wind farms in Colorado to ...

SunTrain seamlessly stores green energy from remote solar and wind farms within customized battery containers that are transported over existing railroad networks.

SunTrain charges LFPs with wind and solar energy and transports the fully charged batteries on a large train to locations where renewable energy access is needed.

The company's concept is to transport charged batteries from solar and wind farms via rail cars to power plants in the Denver area. Each of these standard-sized 20-foot containers can ...

At Maxbo Solar, we engineer the railway-grade BESS containers making catenary-free operations not just possible--but profitable. Here's why engineers from Oslo to Osaka trust us:

SunTrain wants to use the existing freight rail system to transport clean energy from wind farms and solar arrays to the grid.

The star of this demonstration at the Port of San Francisco's Pier 96 rail yard was a freight container that SunTrain had crammed full of lithium ion batteries and mounted on a standard 27-meter railcar.

SunTrain is hoping to ship renewable energy via battery-powered trains, charged from solar and wind, using rail networks.
