

Hey everyone, I recently got a power supply for my PC about two or three weeks ago, and I've noticed it makes a buzzing sound when the power is off. The noise stops when I unplug it, ...

I've built like 7 pc's so far, mostly for relatives and friends, and this is the first time that a new psu has made so much noise. My friend's pc that I built recently that was a really budget...

Unusual buzzing sounds from your PSU can indicate faulty or aging components, variations in required wattage, or poor ventilation. Invest in high-quality PSUs and maintain proper ...

Why is my power supply buzzing, and what should I do about it? We'll help you diagnose the issue and get the problem rectified in this guide.

My old psu sounded like that, it was an issue with the fan. I never ...

You generally want to use a good quality surge strip rather than plugging straight into the wall. Wall power is protected by the breaker and maybe GFCI upstream, but adding a surge strip provides ...

To stop the power supply from buzzing, you need to isolate the source of the problem, determine whether it's a danger, and then choose a solution that's best for your PC.

My old psu sounded like that, it was an issue with the fan. I never had problems with it other than the noise. You should test it with a multimeter tho. Yeah I'm thinking it may be the fan ...

However, a common issue that many people confront is a buzzing noise emanating from their power supply. This article delves into the reasons behind this buzzing noise and provides ...

In this article, we will offer you some tips to identify and resolve noise problems with your PSU, so that you can enjoy optimal performance without interruptions.

The sounds you hear from a power supply, ranging from a faint hum to a high-pitched squeal, are typically not a cause for immediate alarm but indicate an electromechanical interaction ...
