

Can a zero-carbon microgrid be built?

However, it is possible to build a zero-carbon microgrid in the current situation or in the near future due to the small scale of the grid. Accordingly, there are several pilot projects in the real world to achieve zero-carbon microgrids. For example, in 2022, a zero-carbon airport project has been launched in Ordos, China.

What is a microgrid?

1. Introduction A microgrid is a power grid that gathers distributed renewable energy sources and promotes local consumption of renewable energies.

What are the development challenges of achieving zero-carbon microgrids?

The development challenges of achieving zero-carbon microgrids can be summarized as follows: Compared to the cost of renewable power generation investment, the investment cost of energy storage is much higher. It is hard to build a zero-carbon microgrid in an economical way without cheap energy storage.
