

Our range of innovative microgrid controllers offer control, monitoring and management solutions for distributed energy resources, featuring versatile solutions for the integration and management of any ...

Microgrids are stand-alone electrical power systems that integrate electrical loads and two or more generating assets that can operate autonomously or "islanded" from the utility grid.

NLR develops and evaluates microgrid controls at multiple time scales. Our researchers evaluate in-house-developed controls and partner-developed microgrid components using software ...

ETAP Microgrid Control offers an integrated model-driven solution to design, simulate, optimize, test, and control microgrids with inherent capability to fine-tune the logic for maximum system resiliency ...

Honeywell's Microgrid Controls solution provides outcome guarantees, service and support including turnkey offering of BESS, controllers and software to manage unique site energy needs.

The ability to generate, store, and distribute power locally allows microgrid systems to maintain a stable and reliable power supply within a specific area even during power outages. Discover how ABB can ...

Optimal Microgrid Design & Validation
Operational Resiliency
Decarbonization & Decentralization
Lower The Cost of Engineering, Operation & Maintenance
Optimization techniques to evaluate design feasibility
Configure and compare a variety of scenarios to analyze technical performance
Validate microgrid system design and logic incorporating historical, present, or forecasted conditions

microgrid control system, also known as a microgrid automation system, is a comprehensive solution for managing distributed energy resources (DERs), load ...

A microgrid control system, also known as a microgrid automation system, is a comprehensive solution for managing distributed energy resources (DERs), load centers, and grid connectivity to ensure ...

Understand the components, control strategies, and economic benefits of microgrid technology, as well as the challenges and future potential in achieving a greener energy future.

Designed specifically for microgrids, S& C's unique network architecture offers the intelligence and performance required to control, monitor, and communicate with your microgrid's generation sources, ...

Our turnkey microgrid control solutions include electrical system protection, automation, cybersecure networking, real-time controls, visualization (HMIs), and full integration with existing electrical ...
