

In recent years, single-stage boost inverters with common ground have shaped the inverter markets due to the many benefits associated with these types of inverters, including their high efficiency, single ...

It shows that single-stage inverter topologies are suitable for interfacing solar PV to the grid. One of the key factors for reducing the THD level of output current is using output filter circuit.

In this paper, a high-reliability single-phase CSI with switching cells for GCPVS was introduced. The advantages of the proposed converter are listed as follows.

A new boost-type inverter that utilizes a common ground and has fewer switches is proposed in this article. It uses two DC-link capacitors connected in parallel and discharged ...

In this paper, it is proposed to add a passive inductive-capacitive output filter to the inverter structure in order to reduce the dependency of the leakage ground current on the system ...

In this research, a new single-phase 15-level inverter with fewer components is suggested for Solar PV applications. It combines the suggested inverter with a boost converter to ...

In this context, this work presents a novel resource optimized five-level transformerless inverter topology in which ac side decoupling is exploited and it is compared with few existing five-level ...
