

Despite elevated geopolitical tensions and economic uncertainty, this tenth edition of the IEA's World Energy Investment shows that capital flows to the energy sector are set to rise in 2025 to USD 3.3 ...

We must transition to clean energy solutions that drastically cut carbon emissions and provide a sustainable path forward. The synergy between solar PV energy and energy storage solutions will play a ...

DOE will prioritize fossil fuels, but it still expects strong growth from storage, solar, Wright says

In 2023 alone, global solar installations reached 268 GW while battery storage deployments hit 42 GWh. But here's the million-dollar question: should you prioritize solar panels or battery banks first?

We prioritize energy storage innovation because we must break free from the physics of "just-in-time" power delivery, a constraint that dictates everything from our monthly bill to global political stability.

Policy shifts: Adapting to a changing energy landscape Storage integration: Delivering clean, firm power on demand Capital and operational efficiency: Implementing a leaner, smarter strategy Strategic merger and ...

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. Solar. In 2024, generators added a record 30 GW of utility ...

Discover why energy storage is now essential for solar installers after the One Big Beautiful Bill. Learn how to offset lost solar tax credits, meet rising demand, and stay competitive with storage ...

The organizations urged the Public Service Commission to move quickly on battery storage and prioritize storage paired with solar energy, helping to address peak demand and bring electricity prices down.
