

Poland reached a milestone in 2024, generating nearly 29% of its electricity from renewable sources--a slight increase from the previous year's 26%. However, coal remains the ...

The updated national energy and climate plan aims to reach a 32.6% share of renewable energy sources (RESs) in gross final consumption by 2030. Most energy in Poland is used for ...

The installed capacity of renewable energy sources (RES) has surpassed 30 GW, with renewable electricity generation reaching a record 30% in 2024. In the coming years, the role of solar ...

In June 2025, all renewable energy sources (RES) in Poland produced 44.1 per cent of electricity, while coal and lignite plants produced 43.7 per cent, according to preliminary estimates ...

Poland's energy transition is influenced by both the falling costs of renewable energy technologies and the need to attract domestic and foreign investments to replace coal with cleaner energy sources.

Poland has made significant strides in expanding its renewable energy landscape, particularly in solar and wind. With ambitious national targets and EU-aligned policy frameworks, the ...

As coal-based generation declines, capacity additions are increasingly concentrated in renewable energy technologies. Against this backdrop, Poland's renewable power capacity is ...

The transformation of Poland's energy sector, shifting from coal power toward renewable energy sources (RES), is inevitable. Poland has pledged to reduce CO2 emissions, causing radical...

Long a bastion for brown power, the country is embracing renewable energy at an accelerating pace. With regulatory reforms, a growing PPA sector, and increasing M& A activity, ...

Poland generated a record 28.8% of its electricity from renewables in 2024, up from 26% the previous year. Despite this growth, coal continues to be the primary source of electricity, ...
