

Can I install my own solar panels?

Installing your own solar panels can be legal and cost-effective, but navigating the regulations requires careful planning. Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections.

How do I install solar panels?

Ground-mounted panels can be installed anywhere with good sun exposure and enough open space. A minimum of 350 square feet is usually required. Installing solar panels requires the following steps: Plan the solar energy system based on the home's size, location and energy needs. Measure, cut and assemble the support structure for the solar array.

Should you install solar panels without a permit?

Don't skip this crucial step - installing solar panels without proper permits can result in fines, mandatory system removal, or complications when selling your home. Many localities also require certification of your installation by a licensed electrician, even if you do the main installation work yourself.

How do I choose a solar installer?

Installing solar panels involves a lot of paperwork. Your installer should deal with most of this, but knowing what's happening behind the scenes is always helpful. This step can take a while, so choosing an installer experienced with your local permitting process can save valuable time.
