

Solar panels without solar power generation

Can you use solar panels without a battery?

During peak sunlight hours, when the panels produce more electricity than the household consumes, the surplus energy is stored in the battery. This stored energy can then be utilized during periods of low sunlight, such as at night or on cloudy days. It is indeed possible to use solar panels without a battery.

How much solar energy can you generate without a battery?

That's ten times the capacity of the setup with batteries, more than what would fit on the balcony. Without the battery and charge controller, the energy cost of the installation also drops from 9,835 MJ to 2,275 MJ. In other words, I could generate at least four times as much solar energy with the same investment in fossil fuels.

Do solar panels waste a lot of energy?

However, because energy storage in batteries (or the grid-connected alternative) accounts for such a large proportion of the total energy invested, a standalone solar panel can waste quite a lot of energy before it becomes less sustainable than its counterpart with battery storage or grid connection.
