

Solar small-scale on-site energy day and night China

China is changing the world's power game. In May 2025 its solar farms made over 100 terawatt-hours (TWh) in one month. That is about one-third of all the power the United States made ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

According to Bloomberg New Energy Finance (BNEF), as of July 1, 2024, China's small-scale solar power generation capacity has reached 309.5GW, with residential photovoltaics ...

As of 2024, China was responsible for 64 percent of the world's utility-scale solar and wind construction, with 339 gigawatt hours of renewable energy infrastructure in the works, even ...

China's solar panel installations surged in the first half of the year as developers sought to complete projects before the new policy, which removed a guaranteed rate of return, took effect.

Recent data suggest that China may be shifting from distributed solar to utility-scale solar, which would, all things being equal, raise the overall efficiency of its electricity grid while aiding ...

Small-scale, "distributed" PV has become a significant part of the world's biggest solar market but it is now butting up against the same grid constraints that have frustrated utility-scale PV ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

The solar boom experienced in China since 2016 has outpaced grid capacity, driving excessive curtailment of clean electricity generated by utility-scale sites in northern and northwestern...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...
