

Operated by Spanish firm Iberdrola, they are part of a trend that has accelerated Spain's renewable energy output over the past half-decade, making the country a major presence in the industry.

A massive power outage on April 28, 2025, interrupted daily life across Spain, Portugal, and parts of France.

Currently, Spain has 6.3GW of hydroelectric and 1GW of thermal storage capacity installed. In fact, the non-BESS storage capacity in Spain is higher than in any other European country.

Spain's energy sector is in the midst of a transition, with renewables experiencing a trend of rapid growth. The country ranks among the leading renewable energy consumers worldwide, having...

Spain's electricity faces significant challenges. While recent efforts have focused on expanding wind and solar capacity, effective grid integration is equally crucial for a successful energy transition.

The Spain outdoor power supply and generator market has demonstrated consistent growth over the past decade, driven by increasing demand across construction, industrial, and recreational sectors.

Spain's sunny climate and wind-rich regions make it a leader in solar and wind energy. However, renewable sources are intermittent--this is where outdoor BESS systems step in. Think of them as giant "power ...

Hydroelectric power has historically been one of the main sources of renewable energy in Spain. The country boasts several large dams and hydroelectric plants, particularly in the northern regions, where ...

The Spain Power Market Report is Segmented by Power Source (Thermal, Nuclear, and Renewables) and End-User (Utilities, Commercial and Industrial, and Residential).
