

How many small hydropower plants are there in Switzerland?

We operate around 30 small hydropower plants in Switzerland and its neighboring countries. Integrated into the local economy and respectful of regional ecosystems, they contribute to the production of renewable and domestic electricity.

Where does Swiss hydropower come from?

Around 63 % of this energy comes from the mountain cantons of Uri, Graubünden, Ticino and Valais. Significant quantities of hydropower are also produced in the cantons of Aargau and Berne. Approximately 11 % of Swiss hydropower comes from bi-national plants located along border waterways. Switzerland's long-term climate strategy

What is the electricity mix in Switzerland?

The Swiss electricity mix varies from year to year, depending on the availability of different forms of production. Basically, around 60 percent comes from hydropower, around 30 percent from nuclear power and around 10 percent from new renewable energies. PV has been increasing for several years, while growth in wind power remains modest.

How much does hydropower cost in Switzerland?

The use of hydropower generates a turnover of around CHF 1.8 billion (at a price of CHF 5/kWh per power station) and is an important part of the Swiss energy economy.

Sustainably energy production What is small-scale hydropower, mini hydro, pico hydro? Small hydropower is a form of sustainable energy production from hydropower plants with a capacity of up ...

Switzerland currently has around 650 hydroelectric power plants with a capacity of at least 300 kilowatts and around 1000 small hydroelectric power plants. Hydropower production in ...

There are 650 hydroelectric power stations in Switzerland today with an output of at least 300 kilowatts (kW) from the generator, around 1000 small hydroelectric power stations, four nuclear ...

Switzerland's electricity mix includes 56% Hydropower, 30% Nuclear and 9% Solar. Low-carbon generation peaked in 2001.

Hydropower is the most important renewable energy source and the cornerstone of Swiss electricity production. It is at the heart of Alpiq's activities. Thanks to hydropower, we produce CO2 ...

Pumped storage power stations as batteries. Pumped storage power stations allow spontaneous compensation for the over-production or under-production from wind and solar energy ...

In Switzerland, small power plants with a capacity below 10 MW produce more than 3'600 GWh per year. In

comparison, the large power station of Bieudron (VS) holds the world record for ...

Today, there are 650 hydroelectric power plants in Switzerland and around 1,000 small hydropower plants - four times fewer power plants in total than 100 years ago. The first significant ...

A hydroelectric power station Energy Strategy 2050 With its Energy Strategy 2050, the federal government aims to increase average annual electricity production from hydropower to ...

Small-scale hydropower plants have been around for a long time in Switzerland. At the beginning of the twentieth century there were already around 7'000 in operation. But with the advent of low-cost ...
