

Transparent, superhydrophilic surfaces have a wide range of applications, especially for self-cleaning coatings in window panes and solar panels. Herein, reduced graphene oxide (rGO) decorated ...

Nanostructured TiO₂ coatings not only minimize reflection through the graded transition of the refractive index but simultaneously improve the device's ability to self-clean and photocatalytically degrade ...

This study presents a comprehensive investigation into the synthesis and characterization of TiO₂ coatings on glass substrates, focusing on the development of superhydrophilic, self-cleaning titania coatings ...

Building upon existing research on titanium dioxide (TiO₂) nanoparticle coatings, our study investigates their super-hydrophilic and anti-soiling characteristics to enhance self-cleaning...

Titanium dioxide (TiO₂) nanoparticles have significant photocatalytic ability, making them a good fit for self-cleaning coatings on glass surfaces. The sol-gel synthesis is carried out since the method allows for precise ...

This study investigates the properties of nanocomposites and their impact on improving the performance of solar photovoltaic (PV) cells through the deposition of nano Titanium Dioxide (TiO₂) sol onto ...

In Section 3, the functionality of TiO₂ as a coating material for solar cells is discussed. Furthermore, spectrally selective mirrors and applications beyond photovoltaics like optical filters and ...

This study explores the application of titanium dioxide (TiO₂) nanoparticle coatings to address this challenge by enhancing the self-cleaning capabilities of PV panels.

Heterogeneous photocatalysis using titanium dioxide as catalyst is an attractive advanced oxidation process due to its high chemical stability, good performance and low cost. When immobilized in a supporting ...

A new breakthrough opens doors to personalised sustainable energy. A study from 2021 has unlocked the path towards affordability and production of the first invisible solar cells by coupling unique properties of titanium ...
