

In 2025, energy storage capacity in the UK is projected to reach 10 GW, reflecting a growing recognition of the importance of energy storage in ensuring a stable and secure energy supply.

In 2025 to date, approximately 1,405MW of new battery storage capacity has been commissioned, already surpassing the 2024 total of 1,249MW. According to EnergyPulse's research ...

The total energy capacity from commercially operational batteries increased by 1.2 GWh in Q3 2025 - the highest increase ever. This took the total energy capacity to 10 GWh.

Over 4GWh of battery storage was completed in 2025, 30% more than in 2024, making it another record-breaking year in terms of operational capacity added. However, as expected of a ...

Every government is seeking economic growth and energy security but, without flexible capacity, this stalls. The UK and Europe have a choice: move faster, co-ordinate, and scale the ...

A record number of renewable energy projects were given the go-ahead in Great Britain in 2025, after planning approvals almost doubled year on year, according to an analysis.

There were 21,125 small-scale solar installations in the United Kingdom in May 2025, according to accreditation body MCS, which also recorded a record month for battery energy storage...

Large-scale battery systems, pumped hydro and other storage methods could capture the excess energy injected by wind farms on windy days and release it when needed. But are these energy ...

Discover the future of UK battery storage with the UK Battery Energy Storage Market Report 2025. This essential guide charts the sector's growth from early hurdles to over 440GWh of ...

In conclusion, the UK's solar and energy storage sector finds itself at an inflection point - bolstered by supportive policy, buoyant investment, and rapid tech improvements, yet challenged by ...
