

This paper presents a comprehensive study of the application and development status of photovoltaic, thermoelectric, and magnetoelectric generation technologies in four kinds of unmanned ...

The solar cells were used as a primary power source during day flights, while the fuel cells acted as the primary power source during night flights. Additionally, their studies applied an active ...

French aerospace companies XSun and H3 Dynamics will develop an unmanned aerial vehicle powered by a combination of solar energy, hydrogen fuel cells, and battery storage, in what's ...

Solar-powered Unmanned Aerial Vehicles (SPUAVs), commonly known as solar drones, are an innovative and eco-friendly category of aircraft that rely on solar energy as their primary power source.

Unmanned aerial vehicles (UAVs), sometimes called drones, have evolved to play a crucial part in this. The use of UAVs in the context of solar energy will be examined in this article, ...

Under the action of waves, a small unmanned surface vehicle (USV) will experience continuous oscillation, significantly impacting its photovoltaic power generation system.

MANNED WELLHEAD PLATFORM powered by a solar-wind hybrid Shell Malaysia Exploration and Production (SMEP) is determined to make a significant contribution to Shell's commitment to a ...

This paper details our investigation of a battery-free fixed-wing UAV, built from cost-effective off-the-shelf components, that takes off, remains airborne, and lands safely using only solar...

The project aims to modify a 2-metre wingspan remote-controlled (RC) UAV available in the consumer market to be powered by a combination of solar and battery-stored power. The major ...

At Airbus, we are working to use this alternative renewable energy source to power high-endurance stratospheric flight. Our advances in solar cell technology enable unmanned aerial vehicles to stay ...
