

Cold-formed steel structures, such as C channels for solar panels, play a crucial role in making solar energy projects more affordable. This affordability drives the widespread adoption of renewable ...

The aim of this study is to determine the influence of chloride ions on photovoltaic effect of weathering steel, which were exposed in simulated atmospheric condition under illumination for 3 days.

In this paper, three types of weathering steel were developed as substitutes for galvanized steel Q235. The mechanical properties and wet-dry accelerated tests were carried out for the steel.

As one of the world's largest carbon dioxide (CO₂) emitters, low-carbon transformation of iron and steel industry (ISI) is crucial for reaching these goals. The low-carbon production pathway ...

In this paper, three types of weathering steel were developed as substitutes for galvanized steel Q235. The mechanical properties and wet-dry accelerated tests were carried out for ...

The invention belongs to the technical field of metallurgy, and particularly relates to high-strength weathering steel for a photovoltaic bracket and a preparation method thereof.

It explores the evolution of photovoltaic technologies, categorizing them into first-, third-generation photovoltaic cells, and discusses the applications of solar thermal systems ...

In this study, an ultrahigh-strength titanium microalloy weathering steel of 800 MPa grade for photovoltaic support has been developed using the TMCP process. The microstructure and ...

A model experimental set-up was used to investigate the role of the photovoltaic effect of the synthesized corrosion products of g-FeOOH and v-FeOOH on the corrosion of 09CuPCrNi ...
