

Western European Microgrid Outdoor Cabinet Off-Grid Type

Available in both 100kWh and 215kWh capacities, this modular system integrates power modules, batteries, cooling, fire protection, and environment monitoring in a compact outdoor cabinet.

Compatible with solar PV, diesel generators, and grid power, it provides stable energy for microgrids, remote areas, manufacturing facilities, farms, and EV charging stations.

This outdoor cabinet for energy storage system (ESS) applications is engineered to house batteries, inverters, and controllers with superior protection and durability.

With the patented technology of virtual synchronous machine features, it can realize the function of multiple remote free parallels without communication lines and off-grid switching;

Provides consistent power supply in remote or off-grid locations. Extends battery lifespan through thermal and environmental control. Reduces installation complexity with pre-integrated modules and wiring. Enhances ...

- Remote Microgrids: Nordic islands and Eastern European rural areas rely on outdoor cabinets to stabilize off-grid power. In the Faroe Islands, a 2MWh storage system paired with wind turbines ensures 24/7 ...

One of the standout features of this cabinet is its seamless on - grid/off - grid switching capability. When the local grid experiences an outage, it can quickly and smoothly transition to off - grid mode, ensuring that ...

Configurable as behind the meter for self-generation of renewable energy for site loads or as fully independent off-grid solution without grid connectivity required.

Application: frequency regulation, voltage support, renewable energy integration, peak load shifting, microgrid and backup power supply. Charging/discharging rate: 1C, 0.5C, etc.

Our outdoor cabinets are pre-assembled for quick deployment and can operate reliably under wide temperature ranges. They ensure stable energy storage performance in challenging climates, supporting both grid ...
