

What does photovoltaic panel leaseback mean

What is a sale leaseback?

Under a Sale Leaseback, the Developer sells the Solar System to the Bank. The Bank simultaneously leases it back to the Developer under a long-term lease. At the end of the lease, the Developer purchases the System back from the Bank. We break it down by (1) the sale, (2) the lease, and (3) the buyout. Each step explained below.

How does a leaseback work?

Another way of thinking of a leaseback is like a corporate version of a pawnshop transaction. A company goes to the pawnshop with a valuable asset and exchanges it for a fresh infusion of cash. Unlike a pawnshop transaction, there's no expectation to buy the asset back.

What are the different types of leaseback transactions?

Sale and Leaseback is the most common type of leaseback transaction. It occurs when a company sells a property or an asset to a buyer and then leases it back. The lease agreement usually sets out the terms, including the lease period, rent payments, and responsibilities of the seller and buyer.

What is a leaseback vs a loan?

A leaseback has advantages over a loan in that it does not show up as a debt on a company's records. Instead, the balance sheet will show an increase in cash. The company can use this liquid capital to pay off debt, purchase new equipment, or invest in new projects.

Learn about leasebacks: from types to key principles, benefits, risks, legal aspects, and future trends. Explore leasebacks in different jurisdictions.
