

What should I do if my solar panel is damaged?

When dealing with broken or damaged solar panels, it is crucial to assess the extent of the damage before proceeding with any repairs or replacements. This process comprehensively evaluates the panel's physical condition and electrical performance. Begin by conducting a meticulous visual inspection of the solar panel.

What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

Should you replace a damaged solar panel?

Replacement is usually the best option for severely damaged panels, such as those with delamination, major cracks, or significant performance loss due to internal cell damage. Replacing a relatively old damaged panel with a more efficient model can also be beneficial, even if it's repairable.

How do I know if my solar panel is damaged?

Begin by conducting a meticulous visual inspection of the solar panel. Carefully examine the surface for any visible cracks, shattered glass, or signs of physical impact. It is important to document the damage's size, location, and severity. This information will help determine the appropriate course of action.
