

From LED-based steady-state solar simulators to XENON-based flash sun simulators for solar panel testing, we can provide you with a state-of-the-art solution for IV-testing.

It is equipped with a 6.5-kilowatt high-precision water-cooled xenon lamp, with an exposure area of 6500 square centimeters. The xenon lamp source and filter are imported from abroad, which can more ...

These standards provide an international benchmark for PV manufacturers, test laboratories and purchasers to ensure the quality, reliability and long-term performance of PV products.

New energy photovoltaic xenon lamp aging box, testing the aging performance of photovoltaic! The PV xenon lamp aging chamber is a crucial equipment in the photovoltaic power generation system, ...

Product Information: The Light Decay Test Chamber is a high-precision indoor exposure system specifically engineered for the performance degradation analysis of solar modules and cells. By ...

We offer test solutions to measure current-voltage (IV) characteristics of PV cells. Models are available in 1 or 10 amps configurations, determined by the current generated by the device under test.

HighLight A+ 100ms Lab The newer generation, long pulse system for an all-in-one state of the art Xenon system. [Product Page](#)

The carried out experiments suggest that xenon lamps, providing more realistic accelerated aging, should be predominately used in the UV weathering standards in the PV industry, ...

ASTM G155, Xenon Arc Testing for Solar Exposure of Materials, provides a standardized method for evaluating the effects of solar radiation on various materials used in renewable energy technologies.

Q-SUN test chambers are used by companies worldwide in dozens of different industries and applications to aid in the selection of new materials, the improvement of existing materials, or the ...
